Are hybrid PV systems a good investment for Europe?

SolarPower Europe's report entitled "Embracing the Benefits of Hybrid PV Systems" - published in early 2025- examines the potential of hybrid renewable projects co-located with storage or other generation that Europe could leverage to a higher degree. The value proposition of hybrid PV systems extends well beyond simple capacity addition.

Should the EU support hybrid PV projects?

The EU and its Member States should ensure support schemes are adapted to hybrid PV projects. Hybrid PV systems should be able to participate in traditional renewable energy auctions and get bonus points for their system benefits, while avoiding market distortions.

Should hybrid PV be a cornerstone of Europe's integrated energy strategy?

As Europe strives to enhance energy security, reduce system costs, and accelerate decarbonization, unlocking the full potential of hybrid PV systems must become a cornerstone of our integrated energy strategy, the report states.

What is a hybrid energy storage system (Hess)?

The complement of the supercapacitors (SC) and the batteries (Li-ion or Lead-acid) features in a hybrid energy storage system (HESS) allows the combination of energy-power-based storage, improving the technical features and getting additional benefits.

For energy industry stakeholders, the message is clear: with proper regulatory reform, hybrid PV systems could play a pivotal role in accelerating Europe's clean energy transition.

"energy storage" means, in the electricity system, deferring an amount of the electricity that was generated to the moment of use, either as final energy or converted into another energy carrier.

The project combines a 365 MW PV plant, a 264 MW wind farm and a 168 MW battery storage facility. In addition, a 500 kW electrolyser will be installed to produce green hydrogen using ...

Hybrid solar, combining solar with storage or wind, is key for Europe's energy transition. It supports system flexibility, improves the cost-effectiveness of an asset and makes energy ...
