Will solar power and wind power grow in 2027?

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027.

Where does PGE solar power come from?

** Co-owned with NextEra Energy Resources. PGE purchases an additional 103 MW of wind from NextEra. Our solar power comes from large-scale solar projects, third-party suppliers, and even business and residential customers with their own solar installations that feed the grid.

Where does solar power come from?

Our solar power comes from large-scale solar projects, third-party suppliers, and even business and residential customers with their own solar installations that feed the grid. Learn how you can offset your electric use with solar power that you generate at home through our net metering program.

How many wind and solar projects are there?

Fifty-seven wind, solar, and natural gas generation projects. Twenty-two states. One ideally situated company to address the U.S. energy market's transition to lower carbon. Have Questions? We are here to help you!

About this data Electricity generation from solar power Figures are based on gross generation and do not account for cross-border electricity supply.

We aim to quantify the impacts of a large-scale deployment of photovoltaic solar farms in the Sahara on global solar power generation as a pilot case study, and investigate the underlying forcing ...

"Port Westward Unit 2"s advanced technology and unique configuration allow PGE to ramp the plant up to full load in less than 10 minutes. This flexibility allows us to adjust quickly when renewable energy ...

Our solar power comes from large-scale solar projects, third-party suppliers, and even business and residential customers with their own solar installations that feed the grid. Learn how you can offset ...

Electricity generation from solar, measured in terawatt-hours.

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...
