Although the Chinese space project is a solar power system, it's being compared to China's Three Gorges Dam hydroelectric installation due to the massive scope of both.

To gather space solar power, lightweight solar panels on satellites gather solar energy and generate electricity, which is then converted into either lasers or high-frequency radio waves and ...

Though we have greatly improved on solar power in the ...

In a groundbreaking leap for renewable energy, China has announced plans to build a massive solar power station in space. Dubbed the "Three Gorges Dam in space," this ambitious ...

Space-based solar power was first conceptualized in a science fiction story by Isaac Asimov in 1941. A 1 km-wide solar array in space could generate more energy than all the oil ...

China is currently planning to build a gigantic solar power ...

China is currently planning to build a gigantic solar power station in space. To get parts of the array out of our atmosphere, scientists are working on a reusable heavy lift rocket called the...

China is charting a bold new course in energy innovation with a plan to build a space-based solar power station, dubbed the "Three Gorges Dam in Space."
