The Power Play multiplier was 2X. Georgia's lucky ticket holder will have the choice between an annuitized prize of \$478.2 million or a lump sum payment of \$230.6 million.

A solar panel is a device that converts sunlight into electricity by using multiple solar modules that consist of photovoltaic (PV) cells. PV cells are made of materials that produce excited electrons ...

For an additional \$1 per play, the Power Play feature can multiply non-jackpot prizes by 2, 3, 4, 5 or 10 times! Note: the Match 5 prize with Power Play is always \$2 million.

OverviewHistoryTheory and constructionEfficiencyPerformance and degradationMounting and trackingMaintenanceWaste and recyclingA solar panel is a device that converts sunlight into electricity by using multiple solar modules that consist of photovoltaic (PV) cells. PV cells are made of materials that produce excited electrons when exposed to light. These electrons flow through a circuit and produce direct current electricity, which can be used to power various devices or be stored in batteries. Solar panels can be known as solar cell panels, or solar electric p...

Solar power systems that generate electricity consist of photovoltaic (PV) panels to harness sunlight and produce electric current. Solar panels absorb sunlight with silicon semiconductors and ...

PV cells generate direct current (DC) electricity. DC electricity can be used to charge batteries that power devices that use DC electricity. Nearly all electricity is supplied as alternating current (AC) in ...

Players can include both the Power Play[®] and Double Play features on their Powerball ticket, however, the Power Play multiplier does not apply to prizes won in the Double Play drawing.

Solar panel, a component of a photovoltaic system that is made out of a series of photovoltaic cells arranged to generate electricity using sunlight. The main component of a solar ...
