What should I do if my solar panel is not working?

Solution: Inspect for overgrown tree branches or plants. If you find them, trim them immediately. Look for bird droppings, debris, dust, dirt, and tree leaves covering your panels' surface. Use a soft cloth and lukewarm water to clean solar panels. 2. Inverter Issues An inverter is also the key component of your solar system.

How to troubleshoot a solar system?

Below is a list of a few things to keep in mind while troubleshooting solar systems. Wear protective gear, such as non-slip shoes, goggles, a helmet, safety gloves, and other similar equipment. Always use insulated tools while working with electrical wires. Ensure to turn off the solar system before starting troubleshooting.

How to fix a damaged solar panel?

Solution: Solar panels can't bear high pressure; therefore, avoid placing heavy objects on them. Moreover, avoid stepping up directly on the panels, as they may not bear your body weight. Replace the damaged solar panel as a priority. **Symptoms:** Sudden performance drops or irregular power output of the panels.

What if my solar inverter is not working?

If your solar inverter is still experiencing issues, professional support can help restore your system's performance. Solar Water Wind specialises in inverter troubleshooting, repairs, and maintenance, ensuring your solar energy system operates efficiently. Learn how to safely reset your solar inverter with this step-by-step troubleshooting guide.

Solar communication is vital to solar production and savings. Learn the top solar communication issues and troubleshooting steps to take.

If the solar charger is located in a closed enclosure, such as a cabinet, make sure that cold air can enter and hot air can leave the enclosure. Mount vents in the enclosure.

In summary, addressing power loss in a solar monitoring system requires a methodical and informed approach. Effective troubleshooting begins with checking connections, examining ...
