Many of the largest solar power facilities in the world are located in China. Xinjiang solar farm, located in the Xinjiang province, has a total production capacity of five gigawatts.

To access additional data, including an interactive map of global solar farms, a downloadable dataset, and summary data, please visit the Global Solar Power Tracker on the Global Energy Monitor website.

Solar photovoltaic power plants are often constructed in regions that receive abundant sunlight. The most favorable locations include desert areas and regions near the equator where solar ...

Find a list of solar photovoltaic plants that are currently considered the largest on the globe. We have listed the ground-mounted utility-scale stations, which have already been connected to the power ...

The following is a list of photovoltaic power stations that are larger than 500 megawatts (MW) in current net capacity. [1] Most are individual photovoltaic power stations, but some are groups of co-located ...

They are different from most building-mounted and other decentralized solar power because they supply power at the utility level, rather than to a local user or users. Utility-scale solar is sometimes used to ...

Data and information about power plants and their location across the globe, plotted on an Interactive world map

Start exploring solar potential by clicking on the map. Select sites, draw rectangles or polygons by clicking the respective map controls. Calculate energy production for selected sites. The Global Solar ...
