High initial investment costs, inadequate support infrastructure, intermittent power generation, reliance on fossil fuels, and a shortage of skilled workforce are key challenges limiting ...

As of September 2024, non-fossil energy accounts for 46.31% of the total installed electricity capacity in India. The Government of India is optimistic about reaching its renewable ...

India's power grid is struggling to absorb a surge in solar power installations, leading to more curtailment that threatens the build-out of renewables and underscores the need for energy...

India is hoping billions of dollars in subsidies will encourage more people to install solar panels on their rooftops, part of a bid to triple its capacity for renewable energy.

India has been significantly increasing its renewable energy capacity in recent years, but when demand for electricity surges, it still goes back to its most trusted source of power.

Despite significant investment, India's solar energy sector struggles to meet targets, with only 12% of the total solar capacity installed. Discover the challenges and government initiatives ...

Although India boasts ambitious targets, it is still facing several challenges to increase its installed solar capacity, including financing and grid infrastructure.

Unlike most countries, India still has to develop and lift millions like Timungpi from poverty, and it will need to build a power system the size of the European Union's.
