In the 2023/24 dry season, the country experienced an intense drought driven by the El Niño phenomenon. The devastating result was a dramatic drop in water levels, which had a severe ...

Summary: Zambia's recent decision to halt direct sales from photovoltaic panel factories has stirred debates in the renewable energy sector. This article explores the policy's implications for solar ...

The combination of rising tariffs and power shortages is likely to accelerate the adoption of residential solar projects, such as solar inverters, solar power systems, and solar panels, in Zambia.

Off-grid solar-photovoltaic (PV) supply could be the path for achieving energy access in rural areas of sub-Saharan Africa, significantly moving the rural population toward the target of the 7th ...

Summary: This article explores the growing market for downgraded PV module exports, analyzing their applications in solar projects, cost-benefit trade-offs, and global demand trends. Learn how industries ...

Zambia's power utility, ZESCO Limited, is slashing electricity exports fivefold to reduce load-shedding and shield customers from shortages caused by low hydro output.

Zambia's recent boom in the PV (photovoltaic) sector can be attributed to the population search for alternative energy sources to light up their homes and power businesses as the country ...

Zambia's government has announced a cut in electricity exports due to low power generation in the country. In an interview with ZANIS, Energy Minister Peter Kapala explained that the government will ...
